## Important Safety Instructions — SAVE THESE INSTRUCTIONS

Read these instructions carefully and look at the equipment to become familiar with it before trying to install, operate, service or maintain it. The following safety messages may appear throughout this manual or on the equipment to warn of potential hazards or to call attention to information that clarifies or simplifies a procedure.

The addition of this symbol to a "Danger" or "Warning" safety message indicates that an electrical hazard exists which will result in personal injury if the instructions are not followed.

This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages with this symbol to avoid possible injury or death.

## 

**DANGER** indicates a hazardous situation which, if not avoided, will result in death or serious injury.

Failure to follow these instructions will result in death or serious injury.

## 

**WARNING** indicates a hazardous situation which, if not avoided, **could result** in death or serious injury.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

## 

**CAUTION** indicates a hazardous situation which, if not avoided, **could result in** minor or moderate injury.

Failure to follow these instructions can result in injury or equipment damage.

## NOTICE

**NOTICE** is used to address practices not related to physical injury. The safety alert symbol shall not be used with this type of safety message.

Failure to follow these instructions can result in equipment damage.

## **Please Note**

Electrical equipment should only be installed, operated, serviced, and maintained by qualified personnel. No responsibility is assumed by Schneider Electric for any consequences arising out of the use of this material.

A qualified person is one who has skills and knowledge related to the construction, installation, and operation of electrical equipment and has received safety training to recognize and avoid the hazards involved.

### **FCC Statement**

**NOTE:** This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

### **Electromagnetic Compatibility**

### NOTICE

#### **RISK OF ELECTROMAGNETIC DISTURBANCE**

This is a product category C2 UPS product. In a residential environment, this product may cause radio inference, in which case the user may be required to take additional measures.

Failure to follow these instructions can result in equipment damage.

### **Safety Precautions**

### **A A DANGER**

HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

All safety instructions in this document must be read, understood and followed.

Failure to follow these instructions will result in death or serious injury.

### **A A DANGER**

HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

Read all instructions in the installation manual before installing or working on this UPS system.

Failure to follow these instructions will result in death or serious injury.

## 

#### HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

Do not install the UPS system until all construction work has been completed and the installation room has been cleaned. If additional construction work is needed in the installation room after the UPS has been installed, turn off the UPS and cover the UPS with the protective packaging bag the UPS was delivered in.

Failure to follow these instructions will result in death or serious injury.

## **A A DANGER**

#### HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

- The product must be installed according to the specifications and requirements as defined by Schneider Electric. It concerns in particular the external and internal protections (upstream breakers, battery breakers, cabling, etc.) and environmental requirements. No responsibility is assumed by Schneider Electric if these requirements are not respected.
- After the UPS system has been electrically wired, do not start up the system. Start-up must only be performed by Schneider Electric.

Failure to follow these instructions will result in death or serious injury.

## **A A DANGER**

#### HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

The UPS system must be installed according to local and national regulations. Install the UPS according to:

- IEC 60364 (including 60364-4-41– protection against electric shock, 60364-4-42 – protection against thermal effect, and 60364-4-43 – protection against overcurrent), or
- NEC NFPA 70, or
- Canadian Electrical Code (C22.1, Part 1)

depending on which one of the standards apply in your local area.

Failure to follow these instructions will result in death or serious injury.

## **A A DANGER**

#### HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

- Install the UPS system in a temperature controlled indoor environment free of conductive contaminants and humidity.
- Install the UPS system on a non-flammable, level and solid surface (e.g. concrete) that can support the weight of the system.

Failure to follow these instructions will result in death or serious injury.

## **A A DANGER**

#### HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

The UPS is not designed for and must therefore not be installed in the following unusual operating environments:

- Damaging fumes
- Explosive mixtures of dust or gases, corrosive gases, or conductive or radiant heat from other sources
- Moisture, abrasive dust, steam or in an excessively damp environment
- Fungus, insects, vermin
- Salt-laden air or contaminated cooling refrigerant
- Pollution degree higher than 2 according to IEC 60664-1
- Exposure to abnormal vibrations, shocks, and tilting
- · Exposure to direct sunlight, heat sources, or strong electromagnetic fields

Failure to follow these instructions will result in death or serious injury.

## 

#### HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

Do not drill or cut holes for cables or conduits with the gland plates installed and do not drill or cut holes in close proximity to the UPS.

#### Failure to follow these instructions will result in death or serious injury.

## 

#### HAZARD OF ARC FLASH

Do not make mechanical changes to the product (including removal of cabinet parts or drilling/cutting of holes) that are not described in the installation manual.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

## NOTICE

#### **RISK OF OVERHEATING**

Respect the space requirements around the UPS system and do not cover the UPS ventilation openings when the UPS system is in operation.

Failure to follow these instructions can result in equipment damage.

## NOTICE

#### **RISK OF EQUIPMENT DAMAGE**

Do not connect the UPS output to regenerative load systems including photovoltaic systems and speed drives.

Failure to follow these instructions can result in equipment damage.

### **Electrical Safety**

## **A A DANGER**

#### HAZARD OF ELECTRIC SHOCK, EXPLOSION OR ARC FLASH

- Electrical equipment must be installed, operated, serviced, and maintained only by qualified personnel.
- Apply appropriate personal protective equipment (PPE) and follow safe electrical work practices.
- Turn off all power supplying the UPS system before working on or inside the equipment.
- Before working on the UPS system, check for hazardous voltage between all terminals including the protective earth.
- The UPS contains an internal energy source. Hazardous voltage can be present even when disconnected from the utility/mains supply. Before installing or servicing the UPS system, ensure that the units are OFF and that utility/mains and batteries are disconnected. Wait five minutes before opening the UPS to allow the capacitors to discharge.
- A disconnection device (e.g. disconnection circuit breaker or switch) must be installed to enable isolation of the system from upstream power sources in accordance with local regulations. This disconnection device must be easily accessible and visible.
- The UPS must be properly earthed/grounded and due to a high leakage current, the earthing/grounding conductor must be connected first.

Failure to follow these instructions will result in death or serious injury.

### **Battery Safety**

## **A A DANGER**

#### HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

- Battery circuit breakers must be installed according to the specifications and requirements as defined by Schneider Electric.
- Servicing of batteries must only be performed or supervised by qualified personnel knowledgeable of batteries and the required precautions. Keep unqualified personnel away from batteries.
- Disconnect charging source prior to connecting or disconnecting battery terminals.
- Do not dispose of batteries in a fire as they can explode.
- Do not open, alter, or mutilate batteries. Released electrolyte is harmful to the skin and eyes. It may be toxic.

Failure to follow these instructions will result in death or serious injury.

## **A A DANGER**

#### HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

Batteries can present a risk of electric shock and high short-circuit current. The following precautions must be observed when working on batteries

- Remove watches, rings, or other metal objects.
- Use tools with insulated handles.
- Wear protective glasses, gloves and boots.
- Do not lay tools or metal parts on top of batteries.
- Disconnect the charging source prior to connecting or disconnecting battery terminals.
- Determine if the battery is inadvertently grounded. If inadvertently grounded, remove source from ground. Contact with any part of a grounded battery can result in electric shock. The likelihood of such shock can be reduced if such grounds are removed during installation and maintenance (applicable to equipment and remote battery supplies not having a grounded supply circuit).

Failure to follow these instructions will result in death or serious injury.

## 

#### HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

When replacing batteries, always replace with the same type and number of batteries or battery packs.

Failure to follow these instructions will result in death or serious injury.

## 

#### **RISK OF EQUIPMENT DAMAGE**

- Mount the batteries in the UPS system, but do not connect the batteries until the UPS system is ready to be powered up. The time duration from battery connection until the UPS system is powered up must not exceed 72 hours or 3 days.
- Batteries must not be stored more than six months due to the requirement of recharging. If the UPS system remains de-energized for a long period, we recommend that you energize the UPS system for a period of 24 hours at least once every month. This charges the batteries, thus avoiding irreversible damage.

Failure to follow these instructions can result in injury or equipment damage.

## Symbols Used

|             | Earthing/ground symbol.   |
|-------------|---|
|             | Protective earth (PE)/equipment grounding conductor (EGC) symbol.   |
|             | Direct current (DC) symbol.   |
| $\sim$      | Alternating current (AC) symbol.  |
|             | Positive polarity symbol. It is used to identify the positive terminal(s) of equipment which is used with, or generates direct current.   |
|             | Negative polarity symbol. It is used to identify the negative terminal(s) of equipment which is used with, or generates direct current.   |
| <u>-</u> -) | Battery symbol.   |
|             | Static switch symbol. It is used to indicate switches that are designed to connect or disconnect the load to or from the supply respectively without the existence of moving parts. |
|             | AC/DC converter (rectifier) symbol. It is used to identify an AC/DC converter (rectifier) and, in case of plug-in devices, to identify the relevant receptacles.                    |
|             | DC/AC converter (inverter) symbol. It is used to identify an DC/AC converter (inverter) and, in case of plug-in devices, to identify the relevant receptacles.                      |

Г

|               | Fuse symbol. It is used to identify fuse boxes or their locations.   |
|---------------|--|
| $\bigcirc$    | Transformer symbol.  |
| $\rightarrow$ | Input symbol. It is used to identify an input terminal when it is necessary to distinguish between inputs and outputs.   |
| $\rightarrow$ | Output symbol. It is used to identify an output terminal when it is necessary to distinguish between inputs and outputs.   |
| ю <u>/</u>    | Switch disconnector symbol. It is used to identify the disconnecting device in the form of switch that protects the equipment from short circuit or heavy load current. It opens the circuits once the current flow crosses its maximum limit.                     |
| -*1           | Circuit breaker symbol. It is used to identify the disconnecting device in the form of circuit breaker that protects the equipment from short circuit or heavy load current. It opens the circuits once the current flow crosses its maximum limit.                |
|               | Disconnection device symbol. It is used to identify the disconnecting device in the form of circuit breaker or switch that protects the equipment from short circuit or heavy load current. It opens the circuits once the current flow crosses its maximum limit. |
|               | Neutral symbol. It is used to identify the neutral conductors or their locations.  |
|               | Phase conductor symbol. It is used to identify the phase conductors or their locations.  |

## **ENERGY STAR Qualification**

Select models are ENERGY STAR® qualified. For more information on your specific model go to www.se. com.

## **Specifications**

## **Specifications for 400 V Systems**

#### **Recommended Cable Sizes 400 V**

### **A A DANGER**

#### HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

All wiring must comply with all applicable national and/or electrical codes. The maximum allowable cable size is 50 mm<sup>2</sup>.

Failure to follow these instructions will result in death or serious injury.

The maximum number of cable connections per busbar: 2 on input/output/bypass busbars; 2 on DC+/DC- busbars; 4 on N busbar; 5 on PE busbar.

**NOTE:** Overcurrent protection is to be provided by others.

Cable sizes in this manual are based on table B.52.3 and table B.52.5 of IEC 60364-5-52 with the following assertions:

- 90 °C conductors
- An ambient temperature of 30 °C
- · Use of copper conductors
- Installation method C

PE cable size is based on table 54.2 of IEC 60364-4-54.

If the ambient temperature is greater than 30  $^{\circ}$ C, larger conductors are to be selected in accordance with the correction factors of the IEC.

**NOTE:** Recommended cable sizes and maximum allowable cable size may vary for the auxiliary products. Not all auxiliary products support aluminum cables. Refer to the installation manual provided with the auxiliary product.

**NOTE:** The DC cable sizes given here are recommendations – Always follow the specific instructions in the battery solution documentation for DC cable sizes and DC PE cable sizes and ensure that the DC cable sizes match the battery breaker rating.

**NOTE:** Neutral conductor is sized to handle 1.73 times phase current in case of high harmonic content from non-linear loads. If non or less harmonic currents are expected, neutral conductor can be sized accordingly but not less than the phase conductor.

#### Copper

<sup>4.</sup> Values are based on 40 battery blocks.

#### **Recommended Upstream Protection 400 V**

## **A A DANGER**

#### HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

For parallel systems, instantaneous override (Ii) values must not be set higher than 800 A. Place the label 885-92557 adjacent to the upstream circuit breaker to inform about the hazard.

#### Failure to follow these instructions will result in death or serious injury.

**NOTE:** For local directives which require 4-pole circuit breakers: If neutral conductor is expected to carry a high current, due to line-neutral non-linear load, the circuit breaker must be rated according to expected neutral current.

## **Specifications for 480 V Systems**

The supply for input and bypass must be solid-grounded WYE transformers. Delta input supply for either input or bypass is not permitted.

The UPS system must be installed as a separately derived system. Leakage currents will occur in the bonding jumper and the technical/system earth.

#### Input Specifications 480 V

#### Recommended Cable Sizes 480 V

## **A A DANGER**

#### HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

All wiring must comply with all applicable national and/or electrical codes. The maximum allowable cable size is 1/0 AWG.

Failure to follow these instructions will result in death or serious injury.

The maximum number of cable connections per busbar: 2 on input/output/bypass busbars; 2 on DC+/DC- busbars; 4 on N busbar; 5 on G busbar.

**NOTE:** Overcurrent protection is to be provided by others.

Cable sizes in this manual are based on Table 310.15 (B)(16) of the National Electrical Code (NEC) with the following assertions:

- 90 °C (194 °F) conductors (75 °C (167 °F) termination)
- An ambient temperature of 30 °C (86 °F)
- Use of copper conductors

If the ambient temperature is greater than 30 °C (86 °F), larger conductors are to be selected in accordance with the correction factors of the NEC.

Equipment grounding conductors (EGC) are sized in accordance with NEC Article 250.122 and Table 250.122.

**NOTE:** Recommended cable sizes and maximum allowable cable size may vary for the auxiliary products. Not all auxiliary products support aluminum cables. Refer to the installation manual provided with the auxiliary product.

**NOTE:** The DC cable sizes given here are recommendations – Always follow the specific instructions in the battery solution documentation for DC cable sizes and DC EGC cable sizes and ensure that the DC cable sizes match the battery breaker rating.

**NOTE:** Neutral conductor is sized to handle 1.73 times phase current in case of high harmonic content from non-linear loads. If non or less harmonic currents are expected, neutral conductor can be sized accordingly but not less than the phase conductor.

| UPS rating                           | 20 kW | 30 kW | 40 kW | 50 kW |
|--------------------------------------|-------|-------|-------|-------|
| Input phases (AWG/<br>kcmil)         | 8     | 6     | 4     | 3     |
| Input EGC (AWG/<br>kcmil)            | 10    | 8     | 8     | 6     |
| Bypass/output<br>phases (AWG/kcmil)  | 10    | 8     | 6     | 4     |
| Bypass EGC/output<br>EGC (AWG/kcmil) | 10    | 8     | 8     | 8     |
| Neutral (AWG/kcmil)                  | 6     | 4     | 2     | 1/0   |
| DC+/DC-(AWG/<br>kcmil) <sup>9</sup>  | 6     | 4     | 2     | 1/0   |
| DC EGC (AWG/<br>kcmil)               | 8     | 6     | 6     | 6     |

#### Copper

**NOTE:** Cable sizes are based on 80% rated circuit breakers for UIB, UOB, MBB, SSIB, and 100% rated circuit breaker for battery breaker(s).

<sup>9.</sup> Values are based on 40 battery blocks.

#### **Recommended Upstream Protection 480 V**

## **A A DANGER**

#### HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

For parallel systems, instantaneous override (li) values must not be set higher than 800 A. Place the label 885-92557 adjacent to the upstream circuit breaker to inform about the hazard.

Failure to follow these instructions will result in death or serious injury.

## 

#### HAZARD OF FIRE

- Connect only to a circuit with the below specifications.
- Connect to a circuit provided with a 125 A branch circuit overcurrent protection maximum in accordance with the National Electrical Code, ANSI/ NFPA70, and the Canadian Electrical Code, Part I, C22.1.

## Failure to follow these instructions can result in injury or equipment damage.

**NOTE:** Overcurrent protection is to be provided by others and marked with its function.

#### **Recommended Cable Sizes 208 V**

### **A A DANGER**

#### HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

All wiring must comply with all applicable national and/or electrical codes. The maximum allowable cable size is 1/0 AWG.

Failure to follow these instructions will result in death or serious injury.

The maximum number of cable connections per busbar: 2 on input/output/bypass busbars; 2 on DC+/DC- busbars; 4 on N busbar; 5 on G busbar.

**NOTE:** Overcurrent protection is to be provided by others.

Cable sizes in this manual are based on Table 310.15 (B)(16) of the National Electrical Code (NEC) with the following assertions:

- 90 °C (194 °F) conductors (75 °C (167 °F) termination)
- An ambient temperature of 30 °C (86 °F)
- Use of copper conductors

If the ambient temperature is greater than 30 °C (86 °F), larger conductors are to be selected in accordance with the correction factors of the NEC.

Equipment grounding conductors (EGC) are sized in accordance with NEC Article 250.122 and Table 250.122.

**NOTE:** Recommended cable sizes and maximum allowable cable size may vary for the auxiliary products. Not all auxiliary products support aluminum cables. Refer to the installation manual provided with the auxiliary product.

**NOTE:** The DC cable sizes given here are recommendations – Always follow the specific instructions in the battery solution documentation for DC cable sizes and DC EGC cable sizes and ensure that the DC cable sizes match the battery breaker rating.

**NOTE:** Neutral conductor is sized to handle 1.73 times phase current in case of high harmonic content from non-linear loads. If non or less harmonic currents are expected, neutral conductor can be sized accordingly but not less than the phase conductor.

| UPS rating                           | 10 kW | 15 kW | 20 kW | 25 kW   |
|--------------------------------------|-------|-------|-------|---------|
| Input phases (AWG/<br>kcmil)         | 8     | 4     | 3     | 2       |
| Input EGC (AWG/<br>kcmil)            | 8     | 8     | 8     | 6       |
| Bypass/output<br>phases (AWG/kcmil)  | 8     | 6     | 4     | 3       |
| Bypass EGC/output<br>EGC (AWG/kcmil) | 8     | 8     | 8     | 8       |
| Neutral (AWG/kcmil)                  | 6     | 3     | 1     | 2 x 1/0 |
| DC+/DC-(AWG/<br>kcmil) <sup>11</sup> | 10    | 8     | 6     | 4       |
| DC EGC (AWG/<br>kcmil)               | 10    | 10    | 8     | 8       |

**NOTE:** Cable sizes are based on 80% rated circuit breakers for UIB, UOB, MBB, SSIB, and 100% rated circuit breaker for battery breaker(s).

Copper

<sup>11.</sup> Values are based on 40 battery blocks.

#### **Recommended Upstream Protection 208 V**

### **A A DANGER**

#### HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

For parallel systems, instantaneous override (li) values must not be set higher than 800 A. Place the label 885-92557 adjacent to the upstream circuit breaker to inform about the hazard.

Failure to follow these instructions will result in death or serious injury.

## 

#### HAZARD OF FIRE

- Connect only to a circuit with the below specifications.
- Connect to a circuit provided with a 125 A branch circuit overcurrent protection maximum in accordance with the National Electrical Code, ANSI/ NFPA70, and the Canadian Electrical Code, Part I, C22.1.

## Failure to follow these instructions can result in injury or equipment damage.

**NOTE:** Overcurrent protection is to be provided by others and marked with its function.

## **Recommended Bolt and Lug Sizes**

## NOTICE

#### RISK OF EQUIPMENT DAMAGE

Use only UL approved compression cable lugs.

Failure to follow these instructions can result in equipment damage.

#### Copper

| Cable size | Bolt size  | Cable lug type | Crimping tool | Die                 |

# **Installation Procedure for Single System**

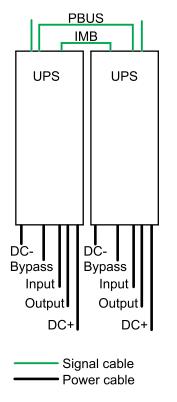

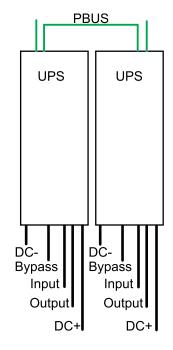

- 1. Prepare for Installation, page 39.
- 2. Install the Seismic Anchoring (Option), page 43.
- 3. Perform one of the following:
  - Connect the Power Cables in Single Mains System, page 44, or
  - Connect the Power Cables in Dual Mains System, page 46.
- 4. Connect the Power Cables from an Adjacent Modular Battery Cabinet, page 48.
- 5. Connect the Signal Cables, page 50.
- 6. Connect the Signal Cables from a Modular Battery Cabinet, page 52.
- 7. Connect the Signal Cables from Switchgear and Third-Party Auxiliary Products, page 53.
- 8. Connect the External Communication Cables, page 58.
- 9. Add Translated Safety Labels to Your Product, page 60.
- 10. Final Installation, page 61.

# **Installation Procedure for Parallel Systems**

## Simplified 1+1 Parallel System

## **Parallel System**

- 1. Prepare for Installation, page 39.
- 2. Install the Seismic Anchoring (Option), page 43.
- 3. Perform one of the following:
  - Connect the Power Cables in Single Mains System, page 44, or
  - Connect the Power Cables in Dual Mains System, page 46.
- Connect the Power Cables from an Adjacent Modular Battery Cabinet, page 48.
- 5. Connect the Signal Cables, page 50.
- 6. Connect the Signal Cables from a Modular Battery Cabinet, page 52.
- 7. Connect the Signal Cables from Switchgear and Third-Party Auxiliary Products, page 53.
- 8. Perform one of the following:
  - For simplified 1+1 parallel system: Connect the IMB Signal Cables in a Simplified 1+1 Parallel System, page 55.
  - For parallel system: Install a padlock on the internal maintenance breaker IMB in the open position on all UPSs in the parallel system.
- 9. Connect the PBUS Cables, page 57.
- 10. Connect the External Communication Cables, page 58.
- 11. Add Translated Safety Labels to Your Product, page 60.
- **12**. Final Installation, page 61.

# **Prepare for Installation**

## **A A DANGER**

## HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

Do not drill or punch holes for cables or conduits with the gland plate installed and do not drill or punch holes in close proximity to the UPS.

Failure to follow these instructions will result in death or serious injury.

**NOTE:** Route the signal cables separately from the power cables and route the Class 2/SELV cables separately from the non-Class 2/non-SELV cables.

- 1. Remove the front panel.
- 2. For UPS without preinstalled power module: Install the power module:
  - a. Remove the screw in each side of the empty power module shelf.
  - b. Push the power module onto the shelf.
  - c. Reinstall the screw in each side of the shelf.

## 

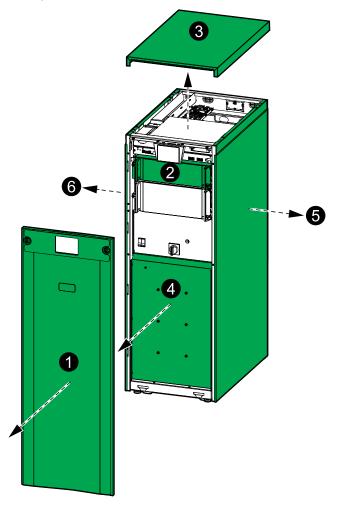

### HEAVY LOAD

Power modules are heavy and require two persons to lift.

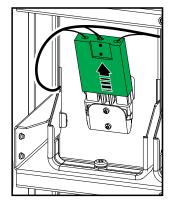

- 20 kW power module weighs 25 kg (55 lbs).
- 50 kW power module weighs 38 kg (84 lbs).

Failure to follow these instructions can result in injury or equipment damage.

- 3. Remove the top cover:
  - a. Remove the screws and tilt the front of the top cover upwards.
  - b. Slide the top cover towards the rear to remove it. Taps in the rear of the top cover must disconnect from the slots in the rear of the UPS.

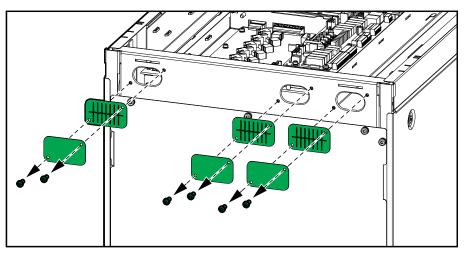

4. Remove the battery cover. Disconnect the battery terminals from the front of the battery modules.

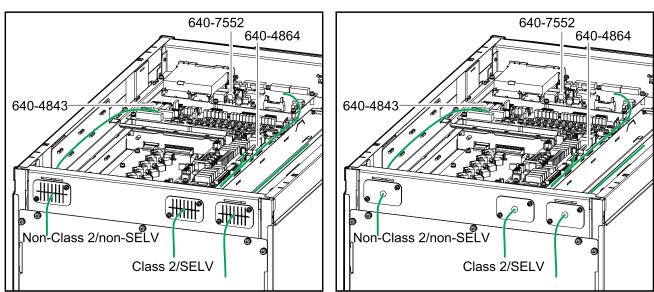

- 5. For installation with a maintenance bypass cabinet: Remove the right side panel. The side panel will be reinstalled on the maintenance bypass cabinet.
- 6. For installation with an adjacent modular battery cabinet: Remove the left side panel.

7. Remove the rear gland plates and the rear brush plates from the UPS. These are for signal cable routing.

## Rear View of the UPS

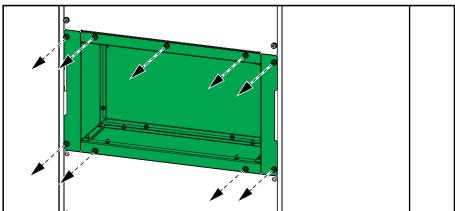

- 8. Perform one of the following:
  - For installation without conduits: Reinstall the brush plates.
  - **For installation with conduits**: Drill a hole in the gland plates for conduits, install conduits, and reinstall the gland plates.
- 9. Route the non-Class 2/non-SELV signal cables through the left rear brush/ gland plate and into the UPS.
- 10. Route the Class 2/SELV signal cables through the middle rear brush/gland plate and into the UPS.
- 11. Route the external communication cables that connect to the controller box through the right rear brush/gland plate and through the cable channel to the front of the UPS.

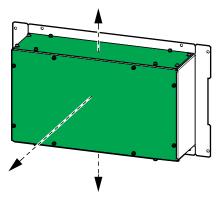

### Rear View of the UPS without Conduits

## Rear View of the UPS with Conduits

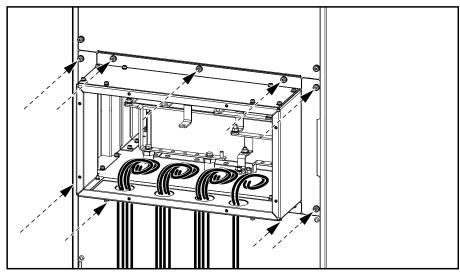

12. Remove the conduit box from the rear of the UPS.

13. Remove the rear plate and the top or bottom gland plate from the conduit box.

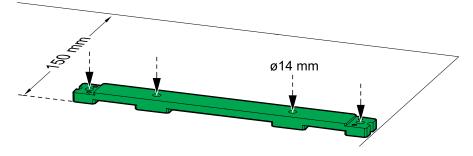

- 14. Drill/punch holes for power cables/conduits in the top or bottom gland plate. Install conduits (not provided), if applicable.
- 15. Reinstall the top or bottom gland plate on the conduit box.
- 16. Install the conduit box on the UPS. Note that the conduit box is installed in the reverse position.

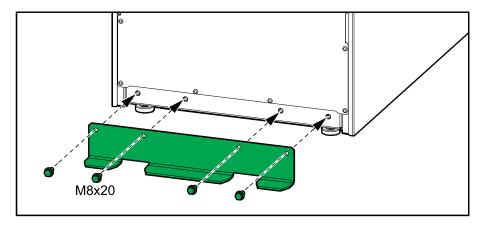

# Install the Seismic Anchoring (Option)

1. Mount the rear anchor(s) to the floor. Use appropriate hardware for the floor type – the hole diameter in the rear anchor is ø14 mm.

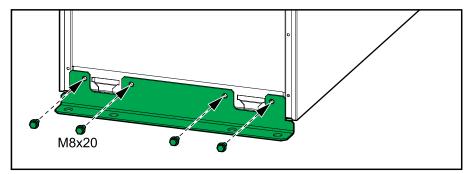

2. Install the rear anchoring bracket on the UPS with the provided M8 bolts.

## Rear View of the UPS

3. Install the seismic front anchoring bracket on the UPS with the provided M8 bolts.

### Front View of the UPS

NOTE: Do not push the UPS into position yet.

# **Connect the Power Cables in Single Mains System**

## NOTICE

## **RISK OF EQUIPMENT DAMAGE**

To ensure correct load sharing in bypass operation in a parallel system:

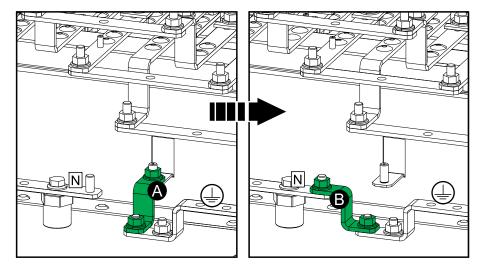

- All output cables must be the same length for all UPSs.
- All input cables must be the same length for all UPSs.

Failure to follow these instructions can result in equipment damage.

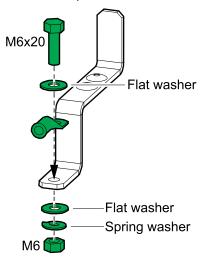

**NOTE:** The UPS is preconfigured for TNS earthing system. 3-wire installation using a bonding busbar will result in a higher leakage current.

1. **Only for TN-C/3-wire earthing system**: Move the bonding busbar from position (A) to position (B) to connect the N busbar to the G/PE busbar.

## **Rear View of UPS**

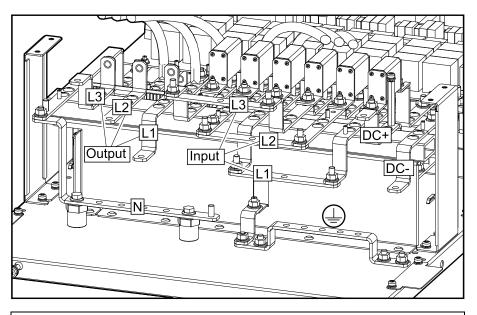

2. Connect the power cables as shown:

- a. Connect the equipment grounding conductor/PE cables.
- b. Connect the input cables.
- c. Connect the output cables.
- d. For installation with a remote modular battery cabinet: Connect the DC cables to the DC busbars.
- e. For installation with an adjacent modular battery cabinet: See Connect the Power Cables from an Adjacent Modular Battery Cabinet, page 48.

#### **Rear View of UPS – Single Mains System**

## **A**CAUTION

## **RISK OF EQUIPMENT DAMAGE**

Check the fastening of the cable lugs. If the cable lugs move due to pulling on cables, the bolt can become loose.

Failure to follow these instructions can result in injury or equipment damage.

# **Connect the Power Cables in Dual Mains System**

## NOTICE

## **RISK OF EQUIPMENT DAMAGE**

To ensure correct load sharing in bypass operation in a parallel system:

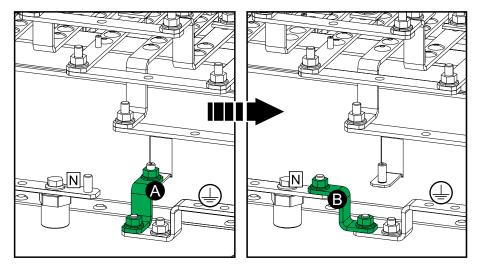

- All bypass cables must be the same length for all UPSs.
- All output cables must be the same length for all UPSs.

Failure to follow these instructions can result in equipment damage.

**NOTE:** The UPS is preconfigured for TNS earthing system. 3-wire installation using a bonding busbar will result in a higher leakage current.

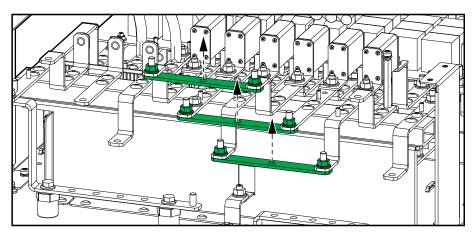

1. **Only for TN-C/3-wire earthing system**: Move the bonding busbar from position (A) to position (B) to connect the N busbar to the G/PE busbar.

### **Rear View of UPS**

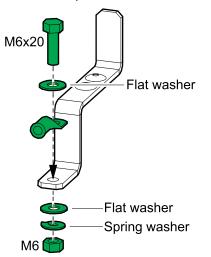

2. Remove the three single mains jumper busbars.

### **Rear View of UPS – Dual Mains System**

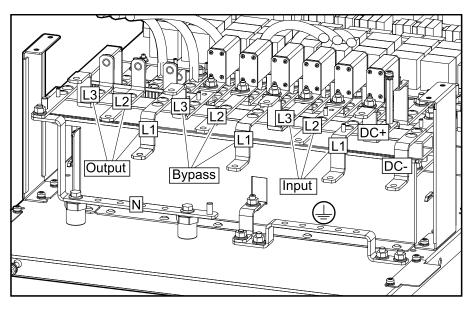

3. Connect the power cables as shown:

- a. Connect the equipment grounding conductor/PE cables.
- b. Connect the input cables.
- c. Connect the bypass cables.
- d. Connect the output cables.
- e. For installation with a remote modular battery cabinet: Connect the DC cables to the DC busbars.
- f. For installation with an adjacent modular battery cabinet: See Connect the Power Cables from an Adjacent Modular Battery Cabinet, page 48.

### **Rear View of UPS – Dual Mains System**

## **A**CAUTION

## **RISK OF EQUIPMENT DAMAGE**

Check the fastening of the cable lugs. If the cable lugs move due to pulling on cables, the bolt can become loose.

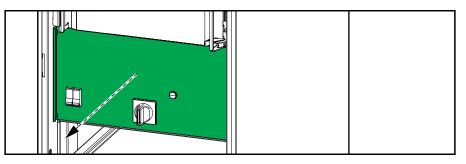

Failure to follow these instructions can result in injury or equipment damage.

# Connect the Power Cables from an Adjacent Modular Battery Cabinet

**NOTE:** The equipment grounding conductor/PE cable (0W49449), the DC cables (0W49426), and the needed bolts and nuts to connect the cables are provided with the modular battery cabinet.

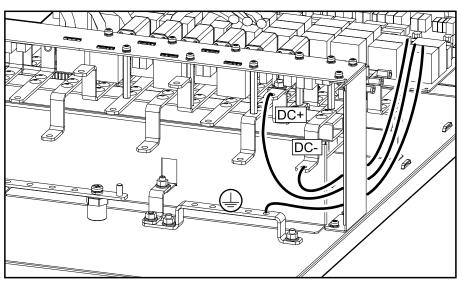

- Set the battery breaker BB to the open (OFF) position and disconnect the battery terminals from the front of the battery modules in the modular battery cabinet(s).
- 2. Remove the front plate on the UPS.

## Front View of the UPS

- 3. Connect the equipment grounding conductor/PE cable (0W49449) to the G/ PE busbar in the UPS.
- 4. Connect the DC cables (0W49426) to the DC busbars in the UPS.
- 5. Route the equipment grounding conductor/PE cable and the DC cables from the rear of the UPS towards the front and up in the gap between modular battery cabinet 1 and the UPS.

### Rear View of the UPS

6. Route the equipment grounding conductor/PE cable and the DC cables into modular battery cabinet 1 and connect the equipment grounding conductor/ PE cable and DC cables in modular battery cabinet 1.

## ō 0 ۲ Ø DC+ 0 00 C F C DC Ø 1 Ø Ø DC+ ۲D DC A đ

## Front View of Adjacent Modular Battery Cabinet 1 and the UPS

7. Reinstall the front plate.

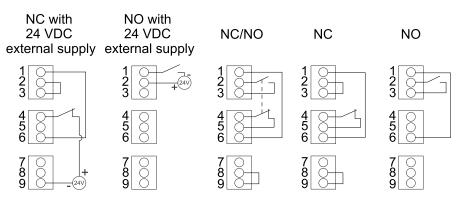

# **Connect the Signal Cables**

**NOTE:** Route the signal cables separately from the power cables and route the Class 2/SELV cables separately from the non-Class 2/non-SELV cables.

1. Connect the Class 2/SELV signal cables from the building EPO to board 640– 4864 terminal J6600 in the UPS according to one of the options below.

The EPO circuit is considered Class 2/SELV. Class 2/SELV circuits must be isolated from the primary circuitry. Do not connect any circuit to the EPO terminal block unless it can be confirmed that the circuit is Class 2/SELV.

#### EPO Configurations (640-4864 terminal J6600, 1-9)

The EPO input supports 24 VDC.

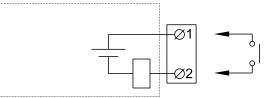

NOTE: The default setting for the EPO activation is to turn off the inverter.

If you want the EPO activation to transfer the UPS into forced static bypass operation instead, please contact Schneider Electric.

 Connect the Class 2/SELV signal cables from the auxiliary products to board 640–4864 in the UPS. Follow the instructions in the auxiliary product manuals. 3. Connect the Class 2/SELV signal cables to the input contacts and output relays on board 640–4864 in the UPS.

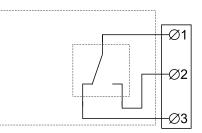

Do not connect any circuit to the input contacts unless it can be confirmed that the circuit is Class 2/SELV.

The input contacts support 24 VDC 10 mA. All circuits connected must have the same 0 V reference.

| Name                    | Description                | Location                     |
|-------------------------|----------------------------|------------------------------|
| IN_1 (input contact 1)  | Configurable input contact | 640-4864 terminal J6616, 1–2 |
| IN _2 (input contact 2) | Configurable input contact | 640-4864 terminal J6616, 3-4 |
| IN _3 (input contact 3) | Configurable input contact | 640-4864 terminal J6616, 5–6 |
| IN_4 (input contact 4)  | Configurable input contact | 640-4864 terminal J6616, 7–8 |

The output relays support 24 VAC/VDC 1 A. All external circuitry must be fused with maximum 1 A fast acting fuses.

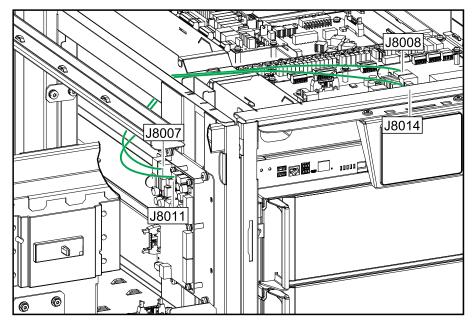

| Name                    | Description               | Location                       |
|-------------------------|---------------------------|--------------------------------|
| OUT _1 (output relay 1) | Configurable output relay | 640–4864 terminal J6617, 1–3   |
| OUT _2 (output relay 2) | Configurable output relay | 640-4864 terminal J6617, 4-6   |
| OUT _3 (output relay 3) | Configurable output relay | 640–4864 terminal J6617, 7–9   |
| OUT _4 (output relay 4) | Configurable output relay | 640–4864 terminal J6617, 10–12 |

4. Connect the non-Class 2/non-SELV signal cables from the auxiliary products to board 640–4843 in the UPS. Follow the instructions in the auxiliary product manuals.

# **Connect the Signal Cables from a Modular Battery Cabinet**

1. Route the signal cables from modular battery cabinet 1 through the left side of the UPS (for an adjacent modular battery cabinet) or through the rear of the UPS (for a remote modular battery cabinet).

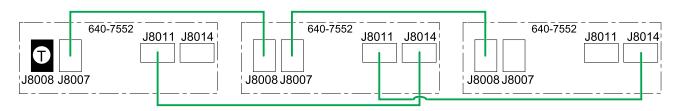

## Front View of Adjacent Modular Battery Cabinet 1 and the UPS

- 2. Connect the signal cables from modular battery cabinet 1 to the UPS:
  - a. Disconnect the termination plug from J8008 on board 640-7552 in the UPS.
  - b. Mount the termination plug in J8008 on board 640-7552 in the last modular battery cabinet (T).
  - c. Connect the signal cable from J8011 on board 640-7552 in modular battery cabinet 1 to J8014 on board 640-7552 in the UPS.
  - d. Connect the signal cable from J8007 on board 640-7552 in modular battery cabinet 1 to J8008 on board 640-7552 in the UPS.

### Modular Battery Cabinet 2,3,4

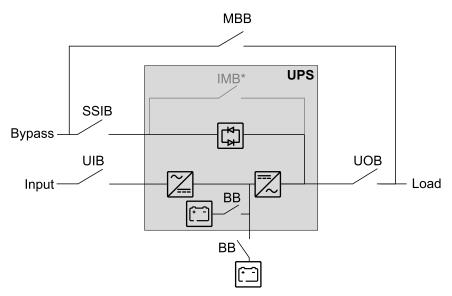

Modular Battery Cabinet 1 UPS

# Connect the Signal Cables from Switchgear and Third-Party Auxiliary Products

**NOTE:** Route the signal cables separately from the power cables and route the Class 2/SELV cables separately from the non-Class 2/non-SELV cables.

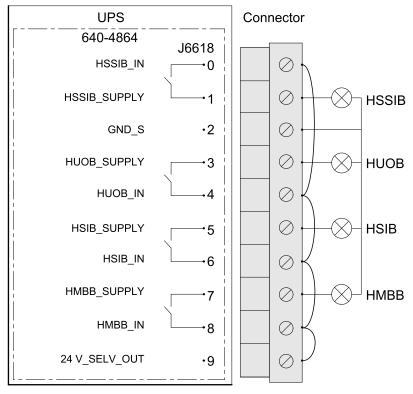

## Example of Single System with Third-Party Switchgear

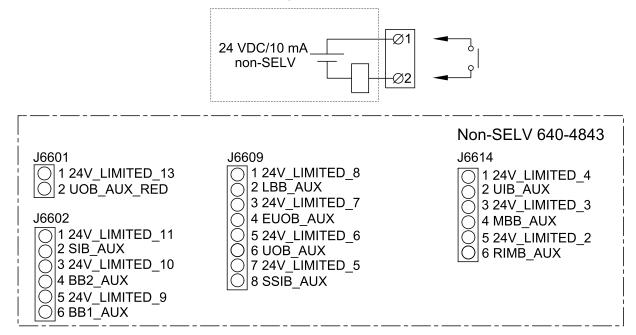

**NOTE:** The internal maintenance breaker IMB\* cannot be used in a system with an external maintenance bypass breaker MBB and the internal maintenance breaker IMB\* must be padlocked in the open position.

1. Connect signal cables from the breaker indicator lights in your switchgear to board 640-4864 terminal J6618 in the top of the UPS. If an external supply is used, remove jumper from J6618 pin 8 and 9.

**NOTE:** The breaker indicator light circuit is considered Class 2/SELV. Class 2/SELV circuits must be isolated from the primary circuitry. Do not connect any circuit to the breaker indicator light terminals unless it can be confirmed that the circuit is Class 2/SELV.

2. Connect signal cables from AUX switches in your switchgear to board 640-4843 in the top of the UPS.

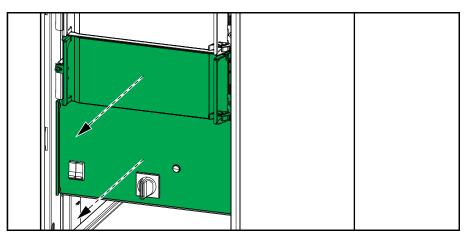

| Terminal<br>number | Function  | Connection   |
|--------------------|---|--|
| J6601              | UOB_RED (redundant AUX switch in unit output breaker) | Connect to redundant AUX switch in unit output breaker UOB.  |
| J6602              | SIB (system isolation breaker)                        | Connect to normally open (NO) AUX switch in system isolation<br>breaker SIB for parallel system. SIB must contain an AUX switch<br>for each connected UPS. |
| J6609              | UOB (unit output breaker)                             | Connect to normally open (NO) AUX switch in unit output breaker UOB.   |
|                    | SSIB (static switch input breaker)                    | Connect to normally open (NO) AUX switch in static switch input<br>breaker SSIB. SSIB must contain an AUX switch for each<br>connected UPS.                |
| J6614              | UIB (unit input breaker)                              | Connect to normally open (NO) AUX switch in unit input breaker UIB. UIB must contain an AUX switch for each connected UPS.                                 |
|                    | MBB (maintenance bypass breaker)                      | Connect to normally closed (NC) AUX switch in maintenance<br>bypass breaker MBB. MBB must contain an AUX switch for each<br>connected UPS.                 |

# Connect the IMB Signal Cables in a Simplified 1+1 Parallel System

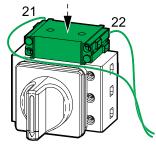

**NOTE:** Route the signal cables separately from the power cables to ensure sufficient isolation.

1. Remove the static switch module and the front plate from both UPSs.

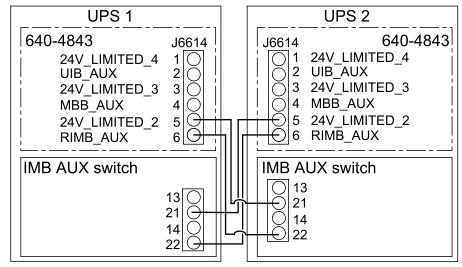

## Front View of the UPS

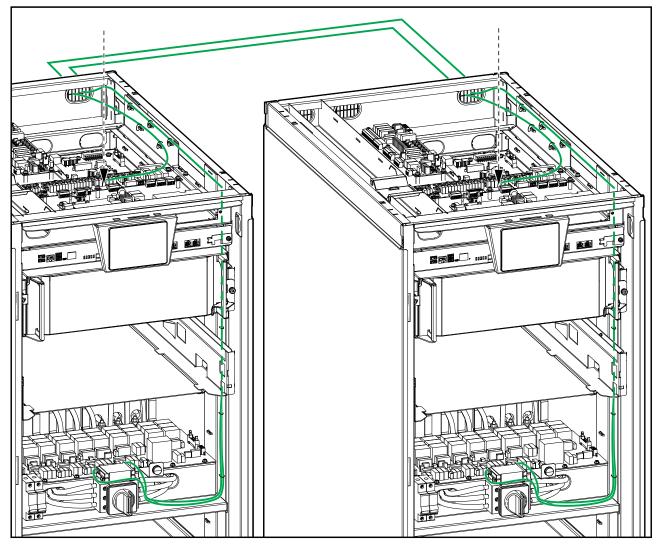

2. Install an additional AUX switch (provided) on the internal maintenance breaker IMB on both UPSs.

- 3. Connect the non-Class 2/non-SELV signal cables between the two UPSs:
  - a. Connect the non-Class 2/non-SELV signal cables (not provided) from the AUX switch terminal 21 and 22 in the internal maintenance breaker IMB in UPS 1 to J6614-5 and J6614-6 on board 640-4843 in UPS 2 as shown.
  - b. Connect the non-Class 2/non-SELV signal cables (not provided) from the AUX switch terminal 21 and 22 in the internal maintenance breaker IMB in UPS 2 to J6614-5 and J6614-6 on board 640-4843 in UPS 1 as shown.

Front View of Simplified 1+1 Parallel System

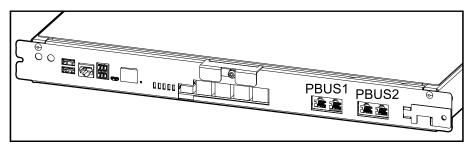

4. Reinstall the front cover and the static switch module on both UPSs.

# **Connect the PBUS Cables**

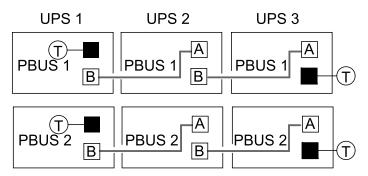

1. Connect the provided PBUS 1 (white) and PBUS 2 (red) cables to the PBUS ports in the UPS controller boxes. Route the PBUS cables through the cable channel in the UPSs.

## Front View of Controller Box

2. Mount termination plugs (T) in the unused connectors.

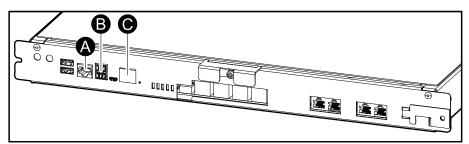

## Example of System with Three UPSs in Parallel

# **Connect the External Communication Cables**

1. Connect the external communication cables to the ports in the UPS controller box.

## Front View of the Controller Box

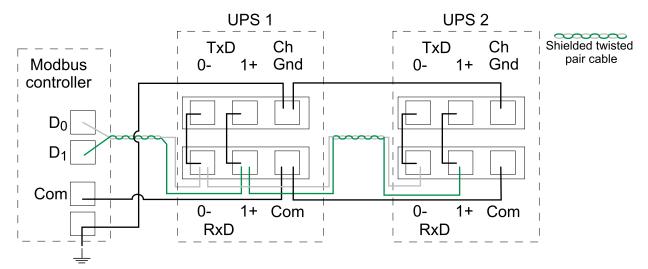

- A. Universal I/O port for built-in network management card.
- B. Modbus port for built-in network management card.
- C. Network port for built-in network management card. Use a shielded network cable.

**NOTE:** Check that you are connecting to the correct port to avoid network communication conflicts.

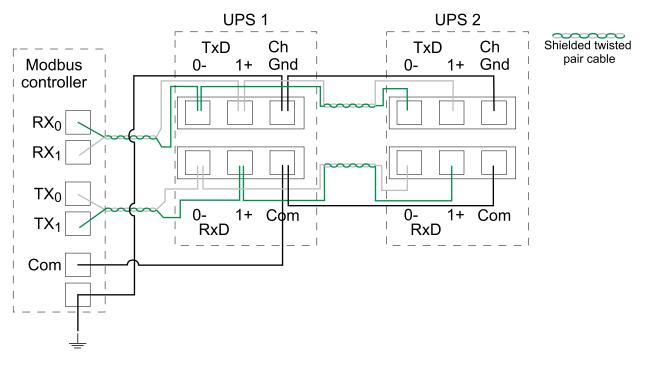

## **Connect the Modbus Cables**

- 1. Connect the Modbus cables to the UPS(s). Use either 2-wire or 4-wire connection.
  - Shielded twisted pair cables must be used for Modbus connections. The shield connection to the ground must be as short as possible (ideally below 1 cm). The cable shield must be connected to the Ch Gnd pin on each device.
  - Wiring should be done in accordance with local wiring codes.
  - Route signal cables separately from power cables to ensure sufficient isolation.
  - The Modbus port is galvanically isolated with the Com pin as ground reference.

## Example: 4-Wire Connection with Two UPSs

2. Install 150 Ohm termination resistors at each end of each bus if the buses are very long and operate at high data rates. Busses under 610 meters (2000 feet) at 9600 baud or under 305 meters (1000 feet) at 19.200 baud should not require termination resistors.

# Add Translated Safety Labels to Your Product

The safety labels on your product are in English and French. Sheets with translated safety labels are provided with your product.

- 1. Find the sheets with translated safety labels provided with your product.
- 2. Check which 885-XXX numbers are on the sheet with translated safety labels.
- 3. Locate the safety labels on your product that match the translated safety labels on the sheet look for the 885-XXX numbers.
- 4. Add the replacement safety label in your preferred language to your product on top of the existing French safety label.

# **Final Installation**

# **A A DANGER**

## HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

Batteries can present a risk of electric shock and high short-circuit current. The following precautions must be observed when working on batteries

- Remove watches, rings, or other metal objects.
- Use tools with insulated handles.
- Wear protective glasses, gloves and boots.
- Do not lay tools or metal parts on top of batteries.
- Disconnect the charging source prior to connecting or disconnecting battery terminals.
- Determine if the battery is inadvertently grounded. If inadvertently grounded, remove source from ground. Contact with any part of a grounded battery can result in electric shock. The likelihood of such shock can be reduced if such grounds are removed during installation and maintenance (applicable to equipment and remote battery supplies not having a grounded supply circuit).

Failure to follow these instructions will result in death or serious injury.

# 

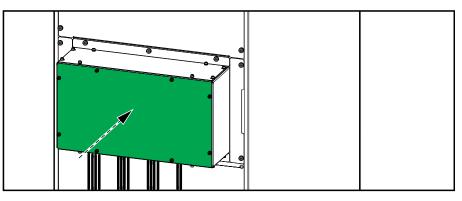

## **RISK OF EQUIPMENT DAMAGE**

Wait until the system is ready to be powered up before installing batteries in the system. The time duration from battery installation until the UPS system is powered up must not exceed 72 hours or 3 days.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

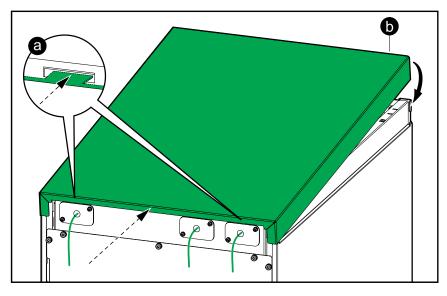

1. Reinstall the rear plate on the conduit box.

## **Rear View of UPS**

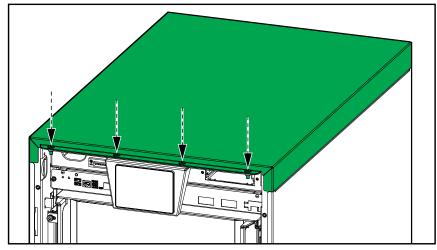

- 2. Reinstall the top cover:
  - a. Tilt the top cover and slide it onto the UPS from the rear. Taps in the rear of the top cover must connect to the slots in the rear of the UPS.
  - b. Push the top cover down in the front.

## **Rear View of the UPS**

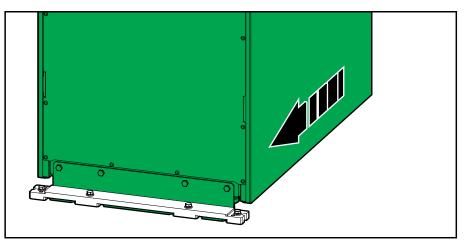

c. Reinstall the screws.

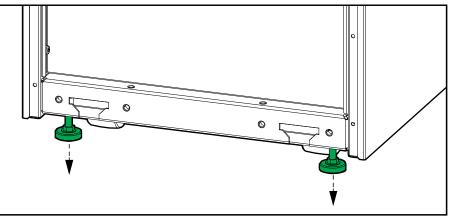

3. **Only for seismic anchoring**: Push the UPS into position so the rear anchoring bracket connects to the rear anchor.

**Rear View of the UPS** 

4. Lower the front and rear leveling feet on the UPS with a wrench until they connect with the floor. Use a bubble-leveler to check that the UPS is level.

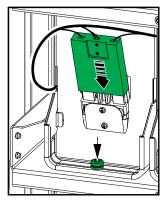

## NOTICE

## **RISK OF EQUIPMENT DAMAGE**

Do not move the cabinet after the leveling feet have been lowered.

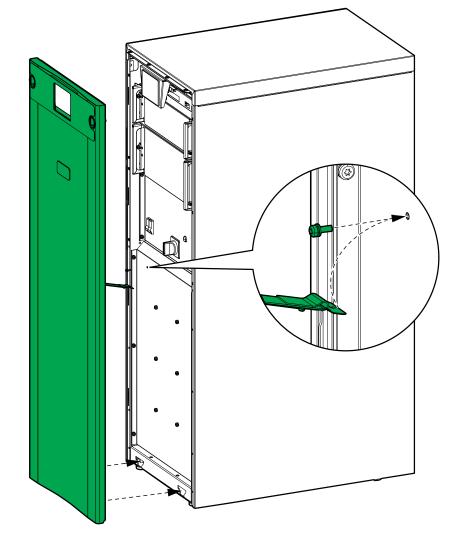

Failure to follow these instructions can result in equipment damage.

- 5. **Only for seismic anchoring**: Mount the seismic front anchoring bracket on the UPS to the floor. Use appropriate hardware for the floor type the hole diameter in the front anchoring bracket is ø18 mm.
- 6. Set the battery breaker BB to the open (OFF) position.
- 7. Push extra battery modules (if any) into the slot. Fill the shelves from the bottom and upwards.
- 8. Turn down the battery module handle on the extra battery modules and fasten the handle to the shelf with the provided screw.
- 9. Connect the battery terminals to the front of the battery modules.

10. Reinstall the battery cover on the UPS.

- 11. Reinstall the front panel on the UPS:
  - a. Insert the two taps in the bottom of the front panel in the UPS at a tilted angle.
  - b. Reconnect the front panel strap to the UPS.
  - c. Close the front panel and lock with the two locking knobs.

Schneider Electric 35 rue Joseph Monier 92500 Rueil Malmaison France
